

LENA™ Pro

Requirements and Recommendations

Recommended System Requirements:

We recommend purchasing a dedicated PC for your LENA System, and additional hard disk space to back up all the audio files.

Different audio environments produce differing audio qualities. The amount of audio data recorded during noisy car rides or playtime at daycare varies greatly from the data stored when a child is taking a quiet nap. Please keep in mind that depending on the environment, each 12- to 16-hour audio file may take between 2 and 16 hours to process.*

For optimal processing, we recommend either:

1. A dedicated PC (2008 model or higher) with 4 GB memory and dual core processor 3.0 GHz
2. Hard disk space of 200 GB. Can be external or internal

Minimum System Requirements:

Processor Speed (Desktop): 2.2 GHz

Processor Speed (Laptop): 1.3 GHz

Memory: 512 MB

Screen Resolution: 1024 x 768

Hard Disk Space: Recommend 10 GB of free space*

Video Card: High-color 32-bit

Operating System: Windows XP with SP2 32-bit only; Windows Vista 32-bit only

Currently, this software is not Macintosh-compatible

* One 16-hour audio file=500 MB

LENA Clothing

Kids will be kids, which means kids will get dirty. To help keep your child clean and comfortable, we recommend purchasing at least two items of clothing.

The pocket in the LENA Clothing is made from specific materials and provides secure placement of the LENA DLP. The special material allows the software to collect and analyze audio based on pitch and distance, and other acoustic properties. Placement is critical to the identification of Key Child or Other children.

For more information on LENA Clothing, feel free to call us at 1.866.728.5558; you may also view pictures of the clothing at <http://www.lenababy.com/Shop>

DLP Configurator

You can employ our DLP Configurator to determine the number of DLPs you need and then send DLPs, clothing, and instructions home with your client. Feel free to try out the tool at <http://www.infoture.org/dlpplanning/Default.aspx>
